Question 1

_____ is an integrity constraint specifying that the value (or existence) of an attribute in one relation depends on the value (or existence) of the same attribute in another relation.
Answer: https://biology-forums.com/index.php?topic=432760

Question 2

Software modules that have been tested, documented, and approved to be included in the most recently created version of a system are called:
A) quality assurance modules
B) baseline modules
C) pretested modules
D) none of the above
Answer: https://biology-forums.com/index.php?topic=433997

Question 3

Which of the following combines three logical and distinct applications (data management, presentation, and analysis) into a single information system application?
A) three-tiered client/server
B) analytical server
C) application server
D) trinity server
Answer: https://biology-forums.com/index.php?topic=432836

Question 4

What are the six characteristics of quality requirement statements?
Answer: https://biology-forums.com/index.php?topic=432435

Question 5

During alpha testing users test a completed information system using simulated data.
A) True
B) False
Answer: https://biology-forums.com/index.php?topic=433243

Question 6

The purpose of coding, testing, and installation is to:
A) systematically repair and improve the information system
B) transform the logical specifications of the system into technology specific details from which all programming and system construction can be done
C) convert the physical system specifications into working and reliable software and hardware, document the work that has been done, and provide help for current and future users and caretakers of the system
D) study and propose alternative replacement systems
Answer: https://biology-forums.com/index.php?topic=433387

Question 7

Assessing project feasibility is a required activity for all information systems projects.
A) True
B) False
Answer: https://biology-forums.com/index.php?topic=431835

Question 8

A diamond shape at the bottom of a module means that the module's subordinates are called over and over again until some terminal condition is encountered.
A) True
B) False
Answer: https://biology-forums.com/index.php?topic=432013

Question 9

XSL-based formatting consists of methods for transforming XML documents into a generic comprehensive form and formatting the generic comprehensive form into a device specific form.
A) True

B) False
Answer: https://biology-forums.com/index.php?topic=432633

Question 10

When assessing usability, you can collect information by _____, _____, _____, and _____.
Answer: https://biology-forums.com/index.php?topic=433460

Question 11

_____ refers to automated tools that read program source code as input and create graphical and textual representations of design-level information such as program control structures, data structures, logical flow, and data flow.
Answer: https://biology-forums.com/index.php?topic=432990

Question 12

When choosing off-the-shelf software, which of the following are the two most important criteria?
A) flexibility and functionality
B) vendor viability and vendor support
C) cost and functionality
D) documentation and response time
Answer: https://biology-forums.com/index.php?topic=432341

Question 13

The primary characteristic of a client-based LAN is that:
A) the database is stored on the file server and all data manipulations are performed by the file server
B) all data manipulation is performed at the file server, not at the client PC
C) all data manipulation is performed at the client PC, not at the file server
D) each client has a copy of the database and performs all data manipulations
Answer: https://biology-forums.com/index.php?topic=432750

Question 14

How can a GSS benefit JAD?
Answer: https://biology-forums.com/index.php?topic=432867

Question 15

The use of graphical software tools that provide complex analysis of data stored in a database best defines:
A) on-line knowledge analysis
B) on-line transaction processing
C) on-line critical processing
D) on-line analytical processing
Answer: https://biology-forums.com/index.php?topic=432926

Question 16

The _____ rejects actions that are fraudulent/deceptive, dehumanize employees, or involve discrimination.
Answer: https://biology-forums.com/index.php?topic=432427

Question 17

In a three-layer data warehouse architecture, users access the data that have been derived from the enterprise data warehouse that are stored in data marts.
A) True
B) False
Answer: https://biology-forums.com/index.php?topic=432701

Question 18

For checking consistency and completeness, Structured English was rated as:
A) the second best technique
B) not very useful
C) the third best technique
D) the best technique
Answer: https://biology-forums.com/index.php?topic=433706

Question 19

A scheduling technique where the order and duration of the sequence of activities directly affect the completion date of a project refers to:

A) sequencing strategy

B) critical path scheduling

C) Gantt scheduling

D) activity scheduling

Answer: https://biology-forums.com/index.php?topic=432819

Question 20

Providing Internet content to users based upon knowledge of that customer best describes:

A) customization

B) personalization

C) micromarketing

D) profiling

Answer: https://biology-forums.com/index.php?topic=432910
