

Question 1

The nurse examines the peripheral vascular system of a client diagnosed with chronic bronchitis 22 years ago. The nurse examines the client's hand. Which statement by the client is consistent with the client's diagnosis?

1. "My fingers look so pointy and narrow at the ends."
2. "My fingernails are as hard as a rock."
3. "My nails always look a little bluish."
4. "My nails have a lot of strange ridges in them."

Answer: <https://biology-forums.com/index.php?topic=565296>

Question 2

The nurse is preparing to examine a male client's reproductive organs. Which actions by the nurse are appropriate to prepare for this examination?

Standard Text: Select all that apply.

1. Secure a private examination room.
2. Use clean hands for the examination.
3. Ask the client to lie down on the exam table.
4. Ask the client to empty his bladder.
5. Make sure the room's temperature is comfortable.

Answer: <https://biology-forums.com/index.php?topic=565391>

Question 3

The nurse is interviewing an older adult client in the clinic who reports incontinence. Numerous attempts in the recent past have been unsuccessful in helping to control the problem. Which is the priority diagnosis for this client?

1. Skin integrity impairment.
2. Self-care deficit.
3. Self-esteem, situational-low.
4. Infection.

Answer: <https://biology-forums.com/index.php?topic=565346>

Question 4

During an eye assessment, a young adult client reports difficulty seeing items within close range. This assessment data is consistent with which item?

1. Aging.
2. Presbyopia.
3. Hyperopia.
4. Astigmatism.

Answer: <https://biology-forums.com/index.php?topic=565134>

Question 5

An older adult client says, "I can't seem to hear as well as I could when I was younger." Which diagnosis does the nurse anticipate for this client?

1. Presbycusis.
2. Mastoiditis.
3. Otitis media.
4. Otitis externa.

Answer: <https://biology-forums.com/index.php?topic=565181>

Question 6

When conducting a focused interview for an older adult client, which interventions by the nurse are appropriate?

Standard Text: Select all that apply.

1. Establishing rapport.
2. Insisting adult children stay in the room.
3. Using a paper robe for infection control purposes.
4. Ensuring background noise is at a minimum.
5. Addressing the client as "honey."

Answer: <https://biology-forums.com/index.php?topic=564895>

Question 7

The nurse taught the client how to self-administer eye drops and the client was performing a return demonstration. During this time, the client inadvertently touched the applicator to their cornea, which caused the client to blink and produce tears. How will the nurse document this occurrence?

1. Abnormal and should be reported to the healthcare provider.
2. Hyperactive.

3. A medication side effect.
4. A normal response.

Answer: <https://biology-forums.com/index.php?topic=565126>

Question 8

The nurse is planning care for a client who is disabled. Which is an advantage of the World Health Organization Disability Assessment Schedule 2.0 (WHODAS 2.0) when assessing this client?

1. It is applicable across cultures.
2. It is cost effective.
3. It does not require training.
4. It is already included in the nursing assessment.

Answer: <https://biology-forums.com/index.php?topic=564851>

Question 9

A client experienced blood loss from surgery. What is the impact of this blood loss on the kidney's functioning?

1. Altered filtering ability of the kidneys.
2. No impact on kidney function.
3. Absorption of calcium and phosphate decreased.
4. Stimulation of the kidneys to produce erythropoietin.

Answer: <https://biology-forums.com/index.php?topic=565365>

Question 10

The nurse educator is observing the student nurse take a blood pressure on an older adult client. When is it appropriate for the nurse educator to intervene during this assessment?

Standard Text: Select all that apply.

1. The student nurse ushers the client into the exam room and immediately assesses the client's blood pressure.
2. The student nurse places the blood pressure cuff on the client's arm over a lightweight, long-sleeved sweater.
3. The student nurse immediately reinflates the cuff after identifying the palpatory systolic blood pressure.
4. The student nurse has the client sit in a chair and supports the client's arm on a table at the level of the heart.
5. The student nurse places the blood pressure cuff on the thigh of a client with a bilateral mastectomy and takes the blood pressure using the popliteal artery.

Answer: <https://biology-forums.com/index.php?topic=564971>

Question 11

The nurse is caring for a client with a right femur fracture. Which type of bone does the nurse identify the femur as when discussing the fracture with the client?

1. Short.
2. Long.
3. Flat.
4. Irregular.

Answer: <https://biology-forums.com/index.php?topic=565440>

Question 12

The nurse is obtaining tricep skinfold measurements on a client. Which locations would the nurse correctly use for this assessment?

1. Midpoint of the arm between the scapula and the elbow.
2. Two inches and centered below the scapula.
3. One inch around the umbilicus.
4. Lateral aspect of thigh.

Answer: <https://biology-forums.com/index.php?topic=565028>

Question 13

The nurse is conducting a health history interview for a client who is experiencing symptoms of asthma. The nurse asks the client, "When did your symptoms begin?" Which interactional skill is the nurse using by asking this question?

1. Attending.
2. Leading.
3. Focusing.
4. Questioning.

Answer: <https://biology-forums.com/index.php?topic=564883>

Question 14

The nurse is preparing a neurological health seminar for the staff on the unit. Which statement would the nurse include in the teaching plan?

1. Older adults experience fewer accidents and injuries.
2. Alcohol or drug use increases the risk for accidents and injury.
3. Head injuries are more common in adults than children.
4. Epilepsy occurs only in children under age 15.

Answer: <https://biology-forums.com/index.php?topic=565498>

Question 15

The unlicensed assistive personnel (UAP) brings the nurse the following vital signs for an older adult client: Temperature 97.4°F (oral), BP 165/70, pulse rate 84/min., and respirations 28. After reviewing the vital signs, which action by the nurse is the most appropriate?

1. Continue to monitor the client.
2. Tell the UAP to recheck the temperature.
3. Obtain an order for an antihypertensive.
4. Obtain an order for oxygen therapy.

Answer: <https://biology-forums.com/index.php?topic=564984>

Question 16

While reviewing the client's demographic information, the nurse notes the client is from Cuba. When planning care for this client, which racial group will the nurse use to determine this client's risk for health disparities?

1. Asian American.
2. African American.
3. Hispanic.
4. Multiracial.

Answer: <https://biology-forums.com/index.php?topic=564842>

Question 17

The nurse is educating a group of adolescents about the risks of chewing tobacco. When describing the manifestation of oral cancer, which information will the nurse include?

1. Bleeding and inflamed gums.
2. Smooth and shiny tongue.
3. Red, swollen tonsils.
4. Ulcerations on the lip or under the tongue.

Answer: <https://biology-forums.com/index.php?topic=565175>

Question 18

Which is an appropriate goal for intimate partner violence (IPV)?

1. Encouraging the use of firearms.
2. Discouraging the use of alcohol.
3. Educating on prevention methods.
4. Discouraging gender roles.

Answer: <https://biology-forums.com/index.php?topic=564860>

Question 19

The nurse is preparing an educational presentation regarding the Healthy People 2020 objectives. Which topics are appropriate and related to the objectives?

Standard Text: Select all that apply.

1. Educate pregnant women regarding the importance of small, more frequent dry meals throughout the day to reduce nausea and vomiting.
2. Educate Asian men about the importance of avoiding alcohol because this is a population that is prone to alcohol abuse.
3. Educate people who are anticipating traveling to India, Asia, Africa, or Central America about ways to reduce their risk of becoming infected with hepatitis E virus.
4. Educate immunocompromised populations and those caring for them about the importance of safe food handling.
5. Educate people about the relationship between regular, thorough oral hygiene practices and good nutrition.

Answer: <https://biology-forums.com/index.php?topic=565343>

Question 20

The nurse is performing an abdominal assessment on a client. During the focused interview, the client tells the nurse about experiencing some abdominal pain recently. As the nurse assesses the client, which behaviors indicate that the client may be experiencing pain or anxiety during the examination?

Standard Text: Select all that apply.

1. The client's respiratory rate is 26 per minute.

2. The client moves away from the nurse's hands.
3. The client grimaces.
4. The client pulls his knees toward his stomach.
5. The client coughs loudly.
