

Question 1

A CHN is working with a family to assist them in taking responsibility for establishing, maintaining, or improving their health. This is an example of which level of prevention?

- a. Primary
- b. Secondary
- c. Tertiary
- d. Quaternary

Answer: <https://biology-forums.com/index.php?topic=833472>

Question 2

A CHN notices that different trends exist when men and women are treated for cardiovascular disease. The CHN works with health care professionals to ensure gender equity is maintained in treating patients. This is an example of which level of prevention?

- a. Primary
- b. Secondary
- c. Tertiary
- d. Quaternary

Answer: <https://biology-forums.com/index.php?topic=833473>

Question 3

A community group is using the program logic model to plan a new community wide system of bike and walking trails. What is true about the program logic model?

- a. Shows how to document different facets of a program after evaluation
- b. Provides a diagram of what the program is supposed to do, with whom, and why
- c. Helpful when started from the top as it does not require specific target groups
- d. Yields a diagram that provides rigid guidelines on the expected impacts of the program

Answer: <https://biology-forums.com/index.php?topic=833304>

Question 4

A community group, including nurses, is concerned about the number of alcohol-related deaths among high school students following graduation parties. How will the group do their program planning?

- a. Address each phase of their framework before moving on to the next phase
- b. Complete a planning framework after justifying the need for the program
- c. Present their plan to funding agencies and then develop their framework
- d. Participate in a complex process that helps to build consensus about priorities

Answer: <https://biology-forums.com/index.php?topic=833321>

Question 5

A community group, including nurses, is concerned about the number of alcohol-related deaths among high school students following graduation parties. How might the nurse package the qualitative data?

- a. Matrices
- b. Meta-analysis
- c. Gantt chart
- d. Integrative review

Answer: <https://biology-forums.com/index.php?topic=833323>

Question 6

A community group, including nurses, is concerned about the number of alcohol-related deaths among high school students following graduation parties. The community group uses the program logic model. What is an appropriate long-term outcome of the program?

- a. Using a designated driver
- b. Decrease in drinking in high school students
- c. Awareness of the relationship between alcohol and death
- d. Decrease in deaths

Answer: <https://biology-forums.com/index.php?topic=833324>

Question 7

A community group, including nurses, is concerned about the number of alcohol-related deaths among high school students following graduation parties. A nurse is reviewing the qualitative data as part of the assessment of the problem. What will the nurse include in this review?

- a. Interviews with senior students
- b. Systemic reviews

- c. School survey
- d. Police reports

Answer: <https://biology-forums.com/index.php?topic=833322>

Question 8

A community group, including nurses, is concerned about the number of alcohol-related deaths among high school students following graduation parties. The group is selecting the priorities for the program. What will guide the group in this process?

- a. Obtaining agreement from managers on the process to ensure their support
- b. Ensuring the priorities address all the identified needs
- c. Holding a community meeting to set priorities
- d. Communicating a list of priorities to the community

Answer: <https://biology-forums.com/index.php?topic=833325>

Question 9

A community group, including nurses, is concerned about the number of alcohol-related deaths among high school students following graduation parties. The group evaluates the program. What would be an example of sustainability of the program?

- a. Students demonstrating knowledge about the effects of alcohol
- b. Continuing funding for education
- c. Promotion of a dry graduation by the student council
- d. Decrease in alcohol-related deaths

Answer: <https://biology-forums.com/index.php?topic=833326>

Question 10

A community health centre has received a grant to start an online support group. Which group would be most likely to be interested in such a service?

- a. Seniors over 65 years
- b. New immigrant men
- c. New mothers
- d. Adolescent men

Answer: <https://biology-forums.com/index.php?topic=833348>

Question 11

A community health nurse has been sent to a small rural community. The incidence of sexually transmitted infections (STIs) in the adolescent population is four times greater than in the surrounding communities. How might the nurse collect quantitative data on the community?

- a. Talk to the community leaders
- b. Review public health records
- c. Drive around the community
- d. Hold a focus group meeting

Answer: <https://biology-forums.com/index.php?topic=833293>

Question 12

A community health nurse has been sent to a small rural community. The incidence of sexually transmitted infections (STIs) in the adolescent population is four times greater than in the surrounding communities. A nurse does a risk assessment of the community. What will this identify?

- a. The incidence of STIs in the community
- b. Location of condom machines
- c. Behaviours that place the adolescents at risk
- d. The organism causing the increase in STIs

Answer: <https://biology-forums.com/index.php?topic=833295>

Question 13

A community health nurse has been sent to a small rural community. The incidence of sexually transmitted infections (STIs) in the adolescent population is four times greater than in the surrounding communities. A nurse wants to plan strategies to reduce the incidence of STIs. What approach would increase community participation?

- a. Ask the stakeholders what is the priority need
- b. Ask the community formal leaders to provide input
- c. Develop a curriculum for teachers on STI prevention
- d. Teach the adolescents about safe sex

Answer: <https://biology-forums.com/index.php?topic=833296>

Question 14

A community health nurse has been sent to a small rural community. The incidence of sexually transmitted infections (STIs) in the adolescent

population is four times greater than in the surrounding communities. What is the best way for the nurse to engage key stakeholders in identifying the cause of the increased rate of STIs?

- a. Hold small focus group meetings in the high school
- b. Hold a community forum open to all taxpayers
- c. Meet with the formal leaders in the community
- d. Send a survey to the parent of adolescents

Answer: <https://biology-forums.com/index.php?topic=833294>

Question 15

A community health nurse has successfully lobbied the government to invest in a rehabilitation facility for people with traumatic brain injuries. What type of health promotion strategy does this represent?

- a. Secondary prevention
- b. Tertiary prevention
- c. Primary prevention
- d. Quaternary prevention

Answer: <https://biology-forums.com/index.php?topic=833297>

Question 16

A Community Health Nurse is engaged in contact tracing. What four main points would he need to consider when identifying contacts?

Answer: <https://biology-forums.com/index.php?topic=833266>

Question 17

A conference in what Canadian city is widely recognized as having given birth to the worldwide health promotion movement?

- a. Toronto
- b. Vancouver
- c. Montreal
- d. Ottawa

Answer: <https://biology-forums.com/index.php?topic=833119>

Question 18

A group of nurses are integrating suicide risk assessment into their work with isolated seniors living in their own homes. Describe the four components they would want to include in their assessment protocols. Give an example of one question that the nurses could ask related to each component.

Answer: <https://biology-forums.com/index.php?topic=833597>

Question 19

A group of nurses are using a population health approach in a community project. What is an example of this approach?

- a. Trying to reduce inequalities in health between population groups
- b. Improving health access for mothers who live east of town
- c. Working to treat illness in selected groups
- d. Addressing only factors that affect the health of preschool children

Answer: <https://biology-forums.com/index.php?topic=833282>

Question 20

A group of nurses are using a program logic model to plan a new multicultural liaison program. What would be the most appropriate short-term outcome for the program?

- a. Increasing awareness in the community of multicultural resources
- b. Building the knowledge of health care workers on how to work with multicultural groups
- c. Building the knowledge of health care workers on how to access the liaison program
- d. Increasing appropriate use of the health care system for multicultural groups

Answer: <https://biology-forums.com/index.php?topic=833306>
