

### Question 1

What is characteristic of conductive hearing loss?

- A) For loss of hearing to be the same at all frequencies
- B) For loss of hearing to primarily involve the upper frequencies
- C) For loss of hearing to primarily involve the middle frequencies
- D) For loss of hearing to primarily involve the lower frequencies

Answer: <https://biology-forums.com/index.php?topic=1891418>

### Question 2

The nurse is planning care for a client with glaucoma who is experiencing anxiety as a result of the diagnosis. Which intervention should the nurse select to address this need?

- A) Assure the client there is nothing to be afraid of.
- B) Support the client's use of coping mechanisms.
- C) Turn off the lights when leaving the client's room.
- D) Refer the client to a counseling psychologist.

Answer: <https://biology-forums.com/index.php?topic=1891429>

### Question 3

Which client's clinical manifestations are most consistent with Guillain-Barré syndrome?

- A) A 13-year-old client feels weakness in the feet, ankles, and legs.
- B) A 5-year-old client feels leg pain and wants to be carried.
- C) A 55-year-old client experiences a lack of hand strength.
- D) A 23-year-old client with peripheral neuropathy has poor glycemic control.

Answer: <https://biology-forums.com/index.php?topic=1891451>

### Question 4

The nurse is providing teaching to a young adult who is at risk for early-onset osteoporosis. Which intervention should the nurse suggest?

- A) The client should stop all physical activity.
- B) The client should reduce the intake of dairy in the diet.
- C) The client should increase intake of calcium and vitamin D.
- D) The client should start estrogen replacement therapy.

Answer: <https://biology-forums.com/index.php?topic=1891234>

### Question 5

A client with BPH is experiencing urinary retention and bladder distention. The nurse understands that, without proper treatment, the client is at risk for complications such as diverticula, hydronephrosis, and hydronephrosis. Which issue related to the client's condition is most important to address in order to reduce the risk for these complications?

- A) The enlarging mass of prostatic tissue must be reduced.
- B) Straining during urination must be avoided.
- C) Bladder pain must be managed.
- D) The weak urinary stream must be strengthened.

Answer: <https://biology-forums.com/index.php?topic=1891011>

### Question 6

A woman has a family history of breast cancer, and genetic testing has revealed a mutation in BRCA2. If this woman develops breast cancer, what is the most likely mechanism for why the cancer developed?

- A) The cells' ability to accurately translate the RNA was impaired.
- B) The cells underwent mitosis rather than meiosis.
- C) The cells' ability to suppress tumor growth was impaired.
- D) The cells were stimulated to undergo rapid cell division.

Answer: <https://biology-forums.com/index.php?topic=1890925>

### Question 7

A client diagnosed with acute kidney injury (AKI) has jugular vein distention, lower extremity edema, and elevated blood pressure. Based on this data, which nursing diagnosis is most appropriate?

- A) Ineffective Renal Tissue Perfusion

- B) Excess Fluid Volume
- C) Risk for Decreased Cardiac Tissue Perfusion
- D) Risk for Infection

Answer: <https://biology-forums.com/index.php?topic=1891043>

### Question 8

Fibromyalgia is a disorder that involves which of the following?

- A) Muscle strength
- B) Respiratory control
- C) Heat regulation
- D) Pain Processing

Answer: <https://biology-forums.com/index.php?topic=1890978>

### Question 9

The nurse is caring for a 13-year-old female with a BMI of 30.4. When taking the child's vital signs, the nurse documents a blood pressure of 121/83. How would this blood pressure be categorized for this client?

- A) Normal blood pressure
- B) Prehypertension
- C) Hypertension
- D) Hypotension

Answer: <https://biology-forums.com/index.php?topic=1891372>

### Question 10

The nurse walks into an examination room and sees a young child demonstrate a specific behavior. (See image.) The nurse recognizes this behavior is most characteristic of which health problem?

- A) Sore throat
- B) Hunger
- C) Otitis media
- D) Head cold

Answer: <https://biology-forums.com/index.php?topic=1891124>

### Question 11

The wife of a client with Parkinson disease (PD) expresses frustration about trying to communicate with her husband. What can the nurse do to facilitate communication between the client and spouse?

- A) Recommend that the client and spouse learn sign language.
- B) Suggest that the spouse obtain a hearing aid.
- C) Consult with speech therapy for exercises to aid the client with speech and language.
- D) Suggest the client and spouse communicating by writing.

Answer: <https://biology-forums.com/index.php?topic=1891289>

### Question 12

Which diagnostic test should the nurse use to assess hearing in an infant?

- A) Otoacoustic emissions test
- B) Weber test
- C) Rinne test
- D) Whisper test

Answer: <https://biology-forums.com/index.php?topic=1891408>

### Question 13

Which of the following procedures would be most appropriate to repair a finger joint that is affected by severe osteoarthritis (OA)?

- A) Osteotomy
- B) Joint resurfacing
- C) Joint fusion
- D) Internal fixation

Answer: <https://biology-forums.com/index.php?topic=1891286>

### Question 14

What is the best way nurses can help clients reduce the risk of COPD?

- A) Providing smoking cessation resources
- B) Encouraging clients to receive vaccinations
- C) Referring clients to a nutritionist
- D) Providing references to local fitness facilities

Answer: <https://biology-forums.com/index.php?topic=1891329>

### Question 15

Which nursing intervention related to perfusion can be performed independently?

- A) Administration of drug regimens
- B) Insertion of device to measure central venous pressure (CVP)
- C) Teaching relaxation techniques
- D) Thoracentesis

Answer: <https://biology-forums.com/index.php?topic=1891344>

### Question 16

Which form of peripheral vascular disease is characterized by thickening, loss of elasticity, and calcification of arterial walls?

- A) Arteriosclerosis
- B) Atherosclerosis
- C) Chronic venous insufficiency
- D) Deep venous thrombosis

Answer: <https://biology-forums.com/index.php?topic=1891381>

### Question 17

A client is classified as Grade 4 for risk of cerebral vasospasm because of intracerebral clotting and absence of blood in the basal cisterns. Which diagnostic test is most useful to assess intracerebral hemorrhage and grade cerebral vasospasms?

- A) Cerebrospinal fluid (CSF) analysis
- B) CT scan
- C) MRI
- D) Transcranial Doppler

Answer: <https://biology-forums.com/index.php?topic=1891201>

### Question 18

The nurse is providing care to a client with asthma. When developing the client's plan of care, which intervention would be most appropriate to promote effective gas exchange?

- A) Provide adequate rest periods
- B) Reduce excessive stimuli
- C) Assist with activities of daily living
- D) Place in Fowler position

Answer: <https://biology-forums.com/index.php?topic=1891325>

### Question 19

While caring for a client diagnosed with end-stage renal disease (ESRD), the nurse tracks the client's serum albumin level. For which nursing diagnosis is this action most indicated?

- A) Excess Fluid Volume
- B) Imbalanced Nutrition: Less than Body Requirements
- C) Risk for Ineffective Perfusion
- D) Risk for Infection

Answer: <https://biology-forums.com/index.php?topic=1891053>

### Question 20

Which of the following statements best characterizes vitamin use?

- A) Clients should be careful not to exceed recommended allowances for daily vitamin intake.
- B) Vitamin D is dangerous if taken in large quantities, but there is no upper limit to Vitamin C intake.
- C) Generally, two multivitamin pills a day is recommended for all clients regardless of diet.

D) Fat-soluble vitamins in general present the least risk of toxicity to clients who take them in excess.
