Question 3

The nurse is providing teaching to a client at risk for acquired peripheral neuropathy. Which of the following activities should the nurse suggest the client modify or avoid to reduce the risk of this condition?

- A) Working as an automobile mechanic on weekends
- B) Playing tennis every Saturday
- C) Drinking one six-pack of beer per day
- D) Typing on the computer for several hours each day

Answer: <https://biology-forums.com/index.php?topic=1891447>

Question 4

The nurse is admitting a client to the intensive care unit. Earlier, the client presented to the emergency department in early septic shock. Given this information, which assessment findings should the nurse anticipate? Select all that apply.

- A) Normal blood pressure
- B) Rapid and deep respirations
- C) Shallow respirations
- D) Warm and flushed skin
- E) Lethargic mental status
- F) Decreased urine output

Answer: <https://biology-forums.com/index.php?topic=1891140>

Question 5

The nurse is caring for a comatose client with metabolic acidosis. For which intervention will the nurse need to collaborate when caring for this client?

- A) Measuring vital signs
- B) Measuring intake and output
- C) The client's recent eating behaviors
- D) Identifying current oxygen saturation level

Answer: <https://biology-forums.com/index.php?topic=1890895>

Question 6

Which best describes photophobia?

- A) Fear of light
- B) Aversion to light
- C) Reactive to light
- D) Need for light

Answer: <https://biology-forums.com/index.php?topic=1891437>

Question 7

The nurse is providing teaching to the family of an older adult client with a urinary tract infection (UTI). Which common early symptom that is likely to occur in older adults should the nurse stress?

- A) Urinary urgency
- B) Blood in the urine
- C) Urinary frequency
- D) Alteration in cognition

Answer: <https://biology-forums.com/index.php?topic=1891148>

Question 8

A client with a previously healed tuberculosis lesion experiences lesion rupture that leads to active disease. Which type of tuberculosis does this client have?

- A) Miliary tuberculosis
- B) Extrapulmonary tuberculosis
- C) Reactivation tuberculosis
- D) Cavitation tuberculosis

Answer: <https://biology-forums.com/index.php?topic=1891146>

Question 9

The nurse is providing care to a client with asthma. When developing the client's plan of care, which intervention would be most appropriate to promote effective gas exchange?

- A) Provide adequate rest periods
- B) Reduce excessive stimuli
- C) Assist with activities of daily living
- D) Place in Fowler position

Answer: <https://biology-forums.com/index.php?topic=1891325>

Question 10

For clients with a deficiency in any hormone, what client teaching is important for the nurse to provide?

- A) Teaching related to increasing fluid intake
- B) Teaching related to decreasing body weight
- C) Teaching related to taking hormone supplements as directed
- D) Teaching related to regulating sugar intake

Answer: <https://biology-forums.com/index.php?topic=1891206>

Question 11

Which of the following triggers pain?

- A) The central nervous system
- B) The peripheral nervous system
- C) The musculoskeletal system
- D) The cardiovascular system

Answer: <https://biology-forums.com/index.php?topic=1890961>

Question 12

The nurse notices that a client who sustained a head injury from a motor vehicle crash begins to demonstrate an abnormal posture. (See image.) What does this posture suggest to the nurse about the client's brain functioning?

- A) Improved level of consciousness
- B) Developing a seizure disorder
- C) Brainstem impairment
- D) Corticospinal tract impairment

Answer: <https://biology-forums.com/index.php?topic=1891178>

Question 13

The nurse is selecting sensory aids for a client with deficits in hearing and sight. Which aid would address both sensory deficits?

- A) Adequate room lighting with night lights
- B) Flashing alarm clock with large numbers
- C) Amplified telephone
- D) Large-print reading material

Answer: <https://biology-forums.com/index.php?topic=1891407>

Question 14

A client with terminal cancer is undergoing surgery to partially remove a tumor that is pressing on a nerve and causing pain. This is classified as what type of surgery?

- A) Reconstructive
- B) Diagnostic
- C) Palliative
- D) Emergency

Answer: <https://biology-forums.com/index.php?topic=1891402>

Question 15

An intervention that can be implemented independently by the nurse caring for a client with an acid-base balance is

- A) monitoring intake and output.
- B) drawing blood for ABGs.
- C) giving sodium bicarbonate infusions.
- D) administering oxygen via nasal cannula.

Answer: <https://biology-forums.com/index.php?topic=1890901>

Question 16

A client who is taking beta-adrenergic blockers for angina is experiencing hypovolemic shock. Which does the nurse anticipate being the priority collaborative intervention for this client?

- A) Administering analgesics for control of pain
- B) Assessing the cause of bleeding
- C) Providing replacement of volume
- D) Establishing invasive cardiac monitoring

Answer: <https://biology-forums.com/index.php?topic=1891387>

Question 17

The nurse is completing an assessment interview with an older adult client being seen for a yearly physical examination. Which client statement would indicate a possible diagnosis of diabetes mellitus?

- A) "I'm slightly winded when I walk up a flight of stairs, but it passes quickly."
- B) "I feel a bit tired by mid-afternoon and take a 30-minute nap most days."
- C) "I sometimes have muscle aches in my upper legs at night."
- D) "I've been experiencing increased thirst during the past several months."

Answer: <https://biology-forums.com/index.php?topic=1891216>

Question 18

Besides the respiratory system, which system would be critical for the nurse to assess in a client recently diagnosed with cystic fibrosis?

- A) Nervous system
- B) Gastrointestinal system
- C) Musculoskeletal system
- D) Urinary system

Answer: <https://biology-forums.com/index.php?topic=1891332>

Question 19

The nurse is caring for a middle-aged male client who is experiencing urinary retention. The client asks the nurse if it is possible that he is experiencing benign prostatic hyperplasia (BPH). During the client history, the client reports that he is of Japanese descent. Which response by the nurse is the most appropriate?

- A) "No, you are not old enough to have BPH."
- B) "Your symptoms are not consistent with BPH."
- C) "You are considered low-risk for BPH."
- D) "Where did you get an idea that you might have BPH?"

Answer: <https://biology-forums.com/index.php?topic=1891009>

Question 20

The nurse is caring for clients in an assisted living facility. Which resident would the nurse identify as being at the highest risk for the development of fractures from a fall?

- A) A resident who participates in resistance training exercises three times a week and takes a calcium supplement
- B) A resident who hikes in the woods once a week and smokes 14 cigarettes per day
- C) A resident who line dances twice per week and has a glass of wine with dinner
- D) A resident who teaches yoga four times per week and is lactose intolerant
