- a. Breastfeeding
- b. Low Apgar scores
- c. Male sex
- d. Birth weight in the 50th or higher percentile
- e. Recent viral illness

Answer: <https://biology-forums.com/index.php?topic=333157>

### Question 2

When interviewing the mother of a 3-year-old child, the nurse asks about developmental milestones such as the age of walking without assistance. This should be considered:

- a. unnecessary information because child is age 3 years.
- b. an important part of the family history.
- c. an important part of the child's past history.
- d. an important part of the child's review of systems.

Answer: <https://biology-forums.com/index.php?topic=332920>

### Question 3

Which of the following data would be included in a health history? (Select all that apply.)

- a. Review of systems
- b. Physical assessment
- c. Sexual history
- d. Growth measurements
- e. Nutritional assessment
- f. Family medical history

Answer: <https://biology-forums.com/index.php?topic=332959>

### Question 4

The vector reservoir for agents causing viral encephalitis in the United States is:

- a. tarantula spiders.
- b. mosquitoes.
- c. carnivorous wild animals.
- d. domestic and wild animals.

Answer: <https://biology-forums.com/index.php?topic=333762>

### Question 5

Acyclovir (Zovirax) is given to children with chickenpox to:

- a. minimize scarring.
- b. decrease the number of lesions.
- c. prevent aplastic anemia.
- d. prevent spread of the disease.

Answer: <https://biology-forums.com/index.php?topic=333219>

### Question 6

A histamine-receptor antagonist such as cimetidine (Tagamet) or ranitidine (Zantac) is ordered for an infant with GER. The purpose of this is to:

- a. prevent reflux.
- b. prevent hematemesis.
- c. reduce gastric acid production.
- d. increase gastric acid production.

Answer: <https://biology-forums.com/index.php?topic=333565>

### Question 7

A nurse is planning care for a Spanish-speaking child and family. The nurse speaks limited Spanish. Which interventions should the nurse plan when caring for this child and family? (Select all that apply.)

- a. Ask a visitor to interpret.
- b. Use a language-line telephone interpreter if a hospital interpreter is not available.
- c. Use written cards with common phrases in the Spanish language.

- d. Ask the family to provide an interpreter.
  - e. When using a hospital interpreter, speak to the family not the interpreter.
- Answer: <https://biology-forums.com/index.php?topic=332856>

### Question 8

- A nurse is conducting a teaching session on the use of time-out as a discipline measure to parents of toddlers. Which are correct strategies the nurse should include in the teaching session? (Select all that apply.)
- a. Time-out as a discipline measure cannot be used when in a public place.
  - b. A rule for the length of time-out is 1 minute per year.
  - c. When the child misbehaves, one warning should be given.
  - d. The area for time-out can be in the family room where the child can see the television.
  - e. When the child is quiet for the specified time, he or she can leave the room.
- Answer: <https://biology-forums.com/index.php?topic=332835>

### Question 9

- Which of the following is the most common clinical manifestation of retinoblastoma?
- a. Glaucoma
  - b. Amblyopia
  - c. Cat's eye reflex
  - d. Sunken eye socket
- Answer: <https://biology-forums.com/index.php?topic=333402>

### Question 10

- Surgery has informed a nurse that the patient returning to the floor after spinal surgery has an opioid epidural catheter for pain management. The nurse should prepare to monitor the patient for which side effects of an opioid epidural catheter? (Select all that apply.)
- a. Urinary frequency
  - b. Nausea
  - c. Itching
  - d. Respiratory depression
- Answer: <https://biology-forums.com/index.php?topic=332975>

### Question 11

- Austin, age 6 months, has six teeth. The nurse should recognize that this is:
- a. normal tooth eruption.
  - b. delayed tooth eruption.
  - c. unusual and dangerous.
  - d. earlier-than-normal tooth eruption.
- Answer: <https://biology-forums.com/index.php?topic=333112>

### Question 12

- What should the nurse consider when discussing language development with parents of toddlers?
- a. Sentences by toddlers include adverbs and adjectives.
  - b. The toddler expresses himself or herself with verbs or combination words.
  - c. The toddler uses simple sentences.
  - d. Pronouns are used frequently by the toddler.
- Answer: <https://biology-forums.com/index.php?topic=332892>

### Question 13

- A school-age child has been admitted with an acute asthma episode. The child is receiving oxygen by nasal prongs at 2 liters. How often should the nurse plan to monitor the child's pulse oximetry status?
- a. Continuous
  - b. Every 30 minutes
  - c. Every hour
  - d. Every 2 hours
- Answer: <https://biology-forums.com/index.php?topic=333537>

### Question 14

- Which nursing consideration is important when caring for a child with impetigo contagiosa?
- a. Apply topical corticosteroids to decrease inflammation.
  - b. Carefully remove dressings so as not to dislodge undermined skin, crusts, and debris.

- c. Carefully wash hands and maintain cleanliness when caring for an infected child.
- d. Examine child under a Wood lamp for possible spread of lesions.

Answer: <https://biology-forums.com/index.php?topic=333827>

### Question 15

A mother is upset because her newborn has erythema toxicum neonatorum. The nurse should reassure her that this is:

- a. easily treated.
- b. benign and transient.
- c. usually not contagious.
- d. usually not disfiguring.

Answer: <https://biology-forums.com/index.php?topic=333022>

### Question 16

The nurse is assessing a 3-day-old, breast-fed newborn who weighed 7 pounds, 8 ounces at birth. The newborn's mother is now concerned that the newborn weighs 6 pounds, 15 ounces. Which is the most appropriate nursing intervention?

- a. Recommend supplemental feedings of formula.
- b. Explain that this weight loss is within normal limits.
- c. Assess child further to determine cause of excessive weight loss.
- d. Encourage mother to express breast milk for bottle feeding the newborn.

Answer: <https://biology-forums.com/index.php?topic=332984>

### Question 17

A nurse is conducting a class for adolescent girls about pelvic inflammatory disease (PID). Why should the nurse emphasize the importance of preventing pelvic inflammatory disease (PID)?

- a. PID can be sexually transmitted.
- b. PID cannot be treated.
- c. PID can have devastating effects on the reproductive tract.
- d. PID can cause serious defects in future children of affected adolescents.

Answer: <https://biology-forums.com/index.php?topic=333308>

### Question 18

Latex allergy is suspected in a child with spina bifida. Appropriate nursing interventions include which action?

- a. Avoid using any latex product.
- b. Use only nonallergenic latex products.
- c. Administer medication for long-term desensitization.
- d. Teach family about long-term management of asthma.

Answer: <https://biology-forums.com/index.php?topic=333920>

### Question 19

Which characteristic is representative of the newborn's gastrointestinal tract?

- a. Stomach capacity is approximately 90 ml.
- b. Peristaltic waves are relatively slow.
- c. Overproduction of pancreatic amylase occurs.
- d. Intestines are shorter in relation to body size.

Answer: <https://biology-forums.com/index.php?topic=332979>

### Question 20

Young people with anorexia nervosa are often described as being:

- a. independent.
- b. disruptive.
- c. conforming.
- d. low achieving.

Answer: <https://biology-forums.com/index.php?topic=333312>
